Velocity:

Imagine we have a 10-day sprint duration, and the velocity of the team is 20 (points per sprint). Let's calculate the team's average velocity (AV) per iteration unit (story points per day)

$$AV = \frac{sprint\ duration}{velocity} = \frac{20}{10} = 2$$

Burndown Chart:
A burndown chart is a graphical representation of work left to do versus time.It is often used in agile software develpoment methodologies such as Scurm.However burndown charts can be applied to any project containing measurable progress over time.
